                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 319 335 9565
                 6:791-806, 1996. First strand cDNA synthesis was primed with an oligo-dT primer containing a Not I site. Double stranded cDNA was lighted to an EcoR I adaptor, digested with Not I, and cloned directionally into pTTT3-Pac vector. The oligonucleotide used to prime the synthesis of first-strand cDNA contains a library tag sequence that is located between the Not I site and the (dT)18 tail. The sequence tag for this library is AGAATCAAGA. This library was created for the program, Gene Discovery in the Visual system, supported by National Eye Institute (NEI)."

/Clone lib="Soares NFL T GBC S1"
/Clone Torgan: pooled; Vector: pT773D-Pac (Pharmacia) with
a modified polylinker; Site 1: Not 1; Site 2: Eco RI;
Equal amounts of plasmid DNA from three normalized
libraries (fetal lung NbHL19W, testis NHT, and B-cell
NCI_CGAP_GCB1) were mixed, and ss circles were made in
vitro. Following HAP purification, this DNA was used as
tracer in a subtractive hybridization reaction. The driver
was PCR-amplified cDNAs from pools of 5,000 clones made
                                                                                                                                                                                                                                                                                                                                                                                                                                               from the same 3 libraries. The pools consisted of I.M.A.G.E. clones 297480-302087, 682632-687239, 726408-728711, and 729096-731399. Subtraction by B Soares and M. Fatima Bonaldo.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Sequence 1, Application US/09964469

Patent No. 6579709

GENERAL INFORMATION:

APPLICANT: GUEGLER, Karl et al

ITILE OF INVENTION: ISOLATED HUMAN KINASE PROTEINS, AND

ITILE OF INVENTION: THEREOF

FILE REFERENCE: CL000636DIV

CURRENT APPLICATION NUMBER: US/09/964,469

CURRENT ELING DATE: 2001-09-28

PRIOR APPLICATION NUMBER: 60/208,331

PRIOR APPLICATION NUMBER: 09/738,894

PRIOR APPLICATION NUMBER: 09/738,894

PRIOR FILING DATE: 2000-12-18

NUMBER OF SEQ ID NOS: 4

SOFTWARE: FastSEQ for Windows Version 4.0

SEQ ID NO 1
